

## Fruit Salad

### Fitness and Meal Tracking App

In my Building User Interfaces class, I created a fitness and meal tracking mobile app called [Fruit Salad](#). The app allows a user to set fitness and nutrition goals, log their daily activity, log meals, review daily goal progress, and track weekly goal progress. Fruit Salad was built using React Native. The name for the app comes from a [track](#) of the same name from Tierra Whack's Whack World album.
